# SiteCafe 2

Internet Cafe Software Suite

## Management solution for LANs

This software is specifically designed to suit the needs of Internet cafes and hotels. SiteCafe allows you to manage credit and customer accounts for several hundred client machines from one central location-whether the clients are connected by a local network or over the Internet.

To use SiteCafe **free**, you will need at least one of the following applications on the client side, which can be purchased from PROVISIO. SiteCafe Manager can manage the following client side programs:

### SiteKiosk Payment Bundle

Our premium product offering a host of extensive billing and other additional functions.

### MyPublicHotSpot:

Allows your customers to surf the Web using your WiFi network and their own laptops with a PIN code.

### Ticket Station

Allows your customers to independently purchase pre-paid PIN codes at a ticket vending machine.

### Multilanguage version

The SiteCafe interface is available in several languages such as English, German, French, Spanish and others.

### Flexible interfaces

All visible surfaces (GUIs) can be adjusted to fit your needs in terms of text and graphics.

## Managing LAN clients

### Extremely easy configuration

Installing and configuring is made extremely easy by the included configuration wizard. You will be taken through every step of the set-up process. No programming skills required.

### SiteCafe manager

SiteCafe Manager lets you manage the two different types of clients, SiteKiosk clients and MyPublicHotSpot at the same time.

### Remaining credit management

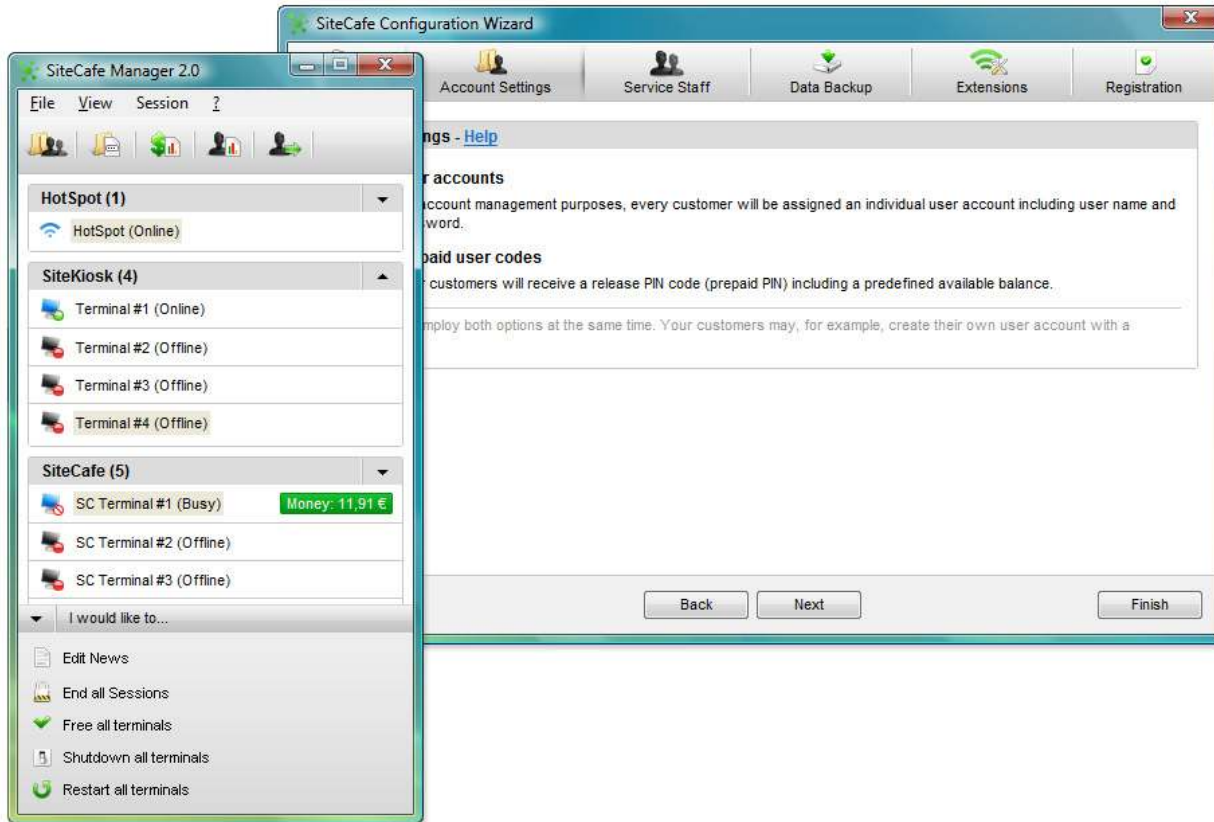

Just like in a phone booth, a user will lose his or her remaining credit at the end of the session. SiteCafe, however, makes it possible to set up a user account to which a user can save his or her credit and also allows you to issue credit balances as prepaid PIN codes (vouchers).

This will, for instance, allow the user to come back to the cafe and use up the credit he or she has left over from the last session.

### Statistics

SiteCafe provides extensive statistical functions that allow you to display and evaluate the following information:

- Cash and session turnovers
- User Login Statistics

## The premium client

You can also use SiteCafe to manage clients with SiteKiosk Payment Bundle.

### Benefits of SiteKiosk

SiteKiosk offers advanced settings and billing options.

- Charging for games
- Charging for programs
- Charging for print jobs
- Charging for CD burning
- Charging for multimedia e-mail messages
- Charging for downloads
- Allowing / denying downloads
- Charging for Web sites
- Allowing / denying Web sites
- Juvenile protection filter
- Zone and day rates

- SiteKiosk Object Model
- Restricted surfing area
- Secondary monitor
- Pre-made on-screen keyboards
- Video and photo e-mails

To download SiteKiosk please visit our Web site at <http://www.provisio.com>.

## MyPublicHotSpot: For customers using their own laptop

Use this module to allow your customers to use your wireless LAN at a charge, e.g. if customers would like to surf the Web using their own laptops.

Connecting to the WLAN works in the same way with which you and your customers are already familiar. You switch your notebook on and search for available and unencrypted WLAN networks. Users connect to your WLAN network and open their Web browser. However, irrespective of the URL they entered, users will now be shown a special welcome page and prompted to authenticate themselves.

The benefits of this software at a glance:

### License once, and allow any number of customers to use HotSpot

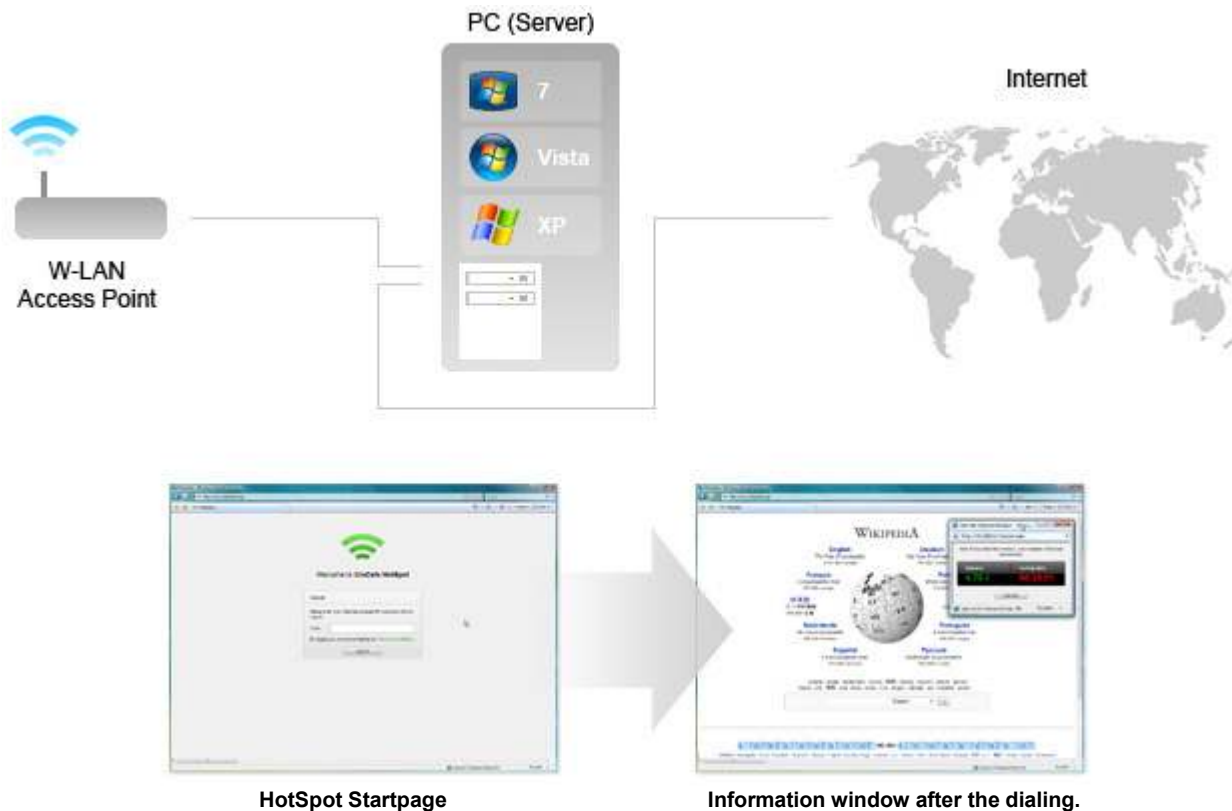

You pay one license fee per installation location (e.g. hotel) no matter how many customers want to use your hot spot at the same time! What is more, you will not be forced to share your revenue with others as is often the case with other existing hot spot solutions.

### Minor hardware investments

You can install MyPublicHotSpot on the same computer that also runs SiteCafe Server. The only two other things you will need to run your own HotSpot is a WLAN access point (hardware) and a second network card - done!

### Conveniently change settings

You can use SiteCafe Manager to adjust all important client settings, e.g. usage fees and news, from one central location.

## Selling tickets using vending machines

The TicketStation allows your customers to independently purchase prepaid PIN codes at a ticket vending machine. TicketStation is not a necessary requirement for running SiteCafe.

The benefits of this software at a glance:

### Installation on the same computer as SiteCafe Server

You can and should install TicketStation on the same computer on which you installed SiteCafe Server. Essentially, all you need is a coin checker or credit card reader, which you can purchase from PROVISIO.

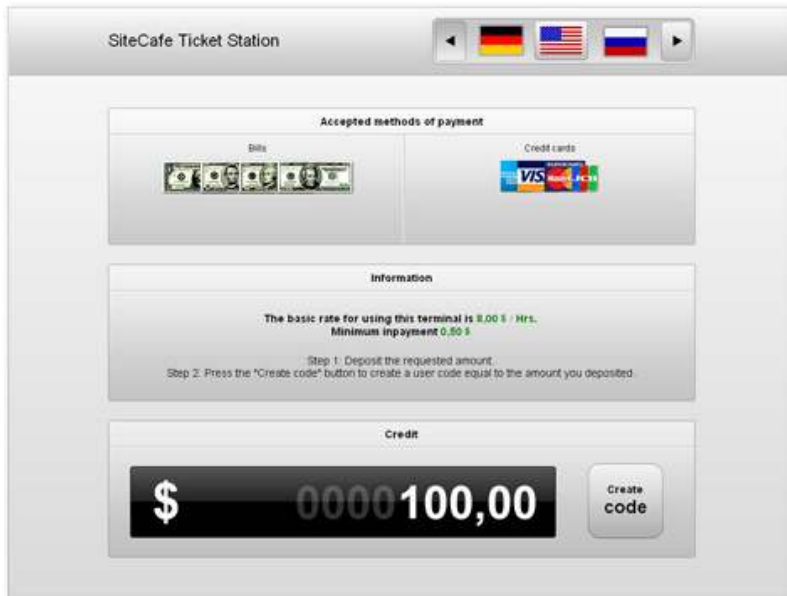

### Automatic generation of PIN codes that equal the desired credit balance

Customers set the value of the prepaid codes themselves by the amount they deposit! TicketStation will then automatically generate a code that equals this amount. This will save you the trouble of generating and printing, for example, 1,000 PIN codes.

Customers can now use this voucher for using the SiteCafe, SiteKiosk or MyPublicHotSpot.

### Selling vouchers without the need for any staff

Since your customers create their own prepaid PIN code using the ticket station, you will need fewer staff. Another advantage: since your staff is not involved in the billing process, your accounts will always be correct at the end of the day.

## Try it before you buy it!

Minimize your risk of purchasing the wrong product and convince yourself of the capabilities of this software before you buy it.

## SiteCafe is the right choice!

- SiteCafe has been continuously improved since 2002
- SiteCafe support 2 different client applications and, therefore, covers the complete range of possible applications.

## Pricing

For information on pricing, visit our online shop at <http://www.provisio.com>.

Log on to our online shop to download our price list as a PDF file.

## SiteCafe (Full Package)

The trial version includes the respective installers for SiteCafe Server, MyPublicHotSpot, and TicketStation. A trial version of SiteKiosk is available as a free download on our Web site.

SiteCafe Server including SiteCafe Manager is free. Before you can use SiteCafe, however, you will have to **purchase** at least one of PROVISIO's client applications on the client end (SiteKiosk Payment Bundle / MyPublicHotSpot). The unregistered version of SiteCafe allows you to operate as many SiteKiosk clients as you want, but limits the number of MyPublicHotSpot Clients to 1.

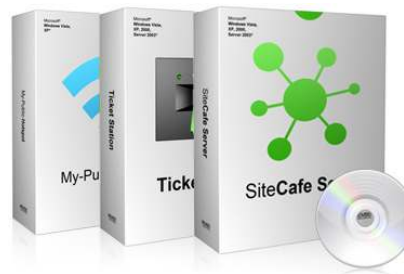

To purchase SiteKiosk and/or MyPublicHotSpot licenses, visit our online shop or refer to a dealer of your choice.

### System requirements:

- Windows XP/Vista/Windows 7 (except the Starter Edition / not compatible with Ticket Station)
- Internet Explorer 6 (IE 7 recommended)
- 500 MHz processor
- 128 MB of RAM (at least 500 MB recommended)
- 100 MB of available hard disk space

**File size:** approx. 25 MB
